CANCERZ | A QUEST FOR ANSWERS

UNDERSTANDING CANCER

From Initiation to Metastasis

A SIX-SESSION COURSE • COURSE OVERVIEW & APPLICATION

THE COURSE

A focused learning journey through cancer biology - from the molecular changes that initiate cancer to tumor development, metastasis, immune interactions, and modern treatment strategies.

THE SIX-SESSION LEARNING JOURNEY

SESSION 01

The Origins of Cancer

Explore mutations, genomic instability, DNA repair, oncogenes, and tumor suppressor genes - and how normal cells become malignant.

SESSION 02

Hallmarks of Cancer

Understand the key capabilities that help cancer cells sustain growth, resist cell death, adapt to stress, and support tumor development.

SESSION 03

Tumor Microenvironment & Cancer Signaling

Discover how cancer cells interact with surrounding tissues and how major signaling pathways regulate tumor growth and survival.

SESSION 04

Cancer Metastasis

Follow the metastatic cascade, from local invasion and entry into blood vessels to circulation, exit, and growth in distant organs.

SESSION 05

Cancer Immunology

Explore immune surveillance, tumor immune evasion, key immune cells, immune checkpoints, and approaches such as CAR-T therapy.

SESSION 06

Cancer Therapeutics

Get introduced to chemotherapy, radiotherapy, targeted therapy, precision oncology, immunotherapy, and treatment resistance.

WHO SHOULD APPLY?

ELIGIBILITY

Students and graduates from Science, Agriculture, Biotechnology, Biology, Pharmacy, Medicine, and related disciplines who want to strengthen their understanding of cancer biology.

READY TO APPLY?

Complete the registration form using the link provided with this announcement.
